## Pile It On!

What do some people do with fruit and vegetable scraps? Or plant trimmings, sawdust, and coffee grounds? They put these things in a pile. Then they add dirt and water. The mixture turns into compost.

Compost makes soil good for growing plants!

Color in the things you can put in a compost pile. (Hint: Four things should be colored.)

Did you know spiders are great for gardens? They eat harmful insects. On the back of this paper, draw a spider. Spiders have eight legs.
